

PSE INC. TAIWAN

Certificate of Compliance

Low Voltage Directive 73/23/EEC and the Amendment Directive 93/68/EEC

Certificate Number:99-1135

Manufacturer: Advantech Co., Ltd.

F4, No. 108-3, Ming-Chuan Road, Shing-Tien, City, Taipei, Taiwan,

R.O.C.

Product

:Computer

 $Model/Type:\ IPC610yyy-25Ryy-zzzzz$

Electrical Rating: I/P: 115/230Vac, 50/60Hz, 6/3A

Other Specification:

Standards applied:EN 60 950:1992 + A1:1993 + A2:1993 + A3:1995 + A4:1997, +A11:1997

The tested samples of the above products are in conformity with the technical provisions of the Following European Directive -

- Low Voltage Directive 73/23/EEC and the Amendment Directive 93/68/EEC

Date Issued: December 7, 1999

Approve & Authorized Signer:

Sharon Chang

Rating	I/P:AC 115/230Vac, 50/60Hz, 6/3A

Test item particulars:

Equipment mobility for building-in

Operating condition continuous

Tested for IT power systems No

IT testing, phase-phase voltage (V)...... N.A.

Class of equipment Class !

Mass of equipment (kg) 20.2 kg

Protection against ingress of water IPXO

Possible test case verdicts:

- test case does not apply to the test object N(.A.)

- test object does meet the requirement...... P(ass)

- test object does not meet the requirement...... F(ail)

General remarks:

"(see remark #)" refers to a remark appended to the report.

"(see test result)" refers to a test report.

Throughout this report a point is used as the decimal separator.

The test results presented in this report relate only to the object tested.

This report shall not be reproduced except in full without the written approval of the testing laboratory.

Comments:

This test-report includes the following documents:

- Test report (30 pages)
- Photo (3 pages)
- Test result (11 pages)

The test samples is pre-production without serial number.

Clause	Requirement Test	Result - Remark	Verdict

1			
	2	FUNDAMENTAL DESIGN REQUIREMENTS	P

2.1	Protection against electric shock and energy has	zards	P
2.1.2	Protection against operator contact	No access with test finger to any parts with only basic insulation to ELV or hazardous voltage.	Р
		The test pin can not touch hazardous voltage through any openings within the appliance.	
2.1.3	Internal wiring at ELV	No ELV wiring in operator accessible area.	N
2.1.4	Unintentional contact in service access area	No maintenance work in operation mode necessary.	N
2.1.5	Energy hazard in operator access are	Energy does not exceed 240VA between any two points in accessible parts of secondary circuitry.	Р
		See appended table.	
2.1.6	Clearances behind conductive enclosures	Referto 4.2.3	Р
		See page 3 of test result.	
2.1.7	Knobs, handles etc.	None at ELV or hazardous voltage	Р
2.1.8	Insulation of conductive handles, knobs etc.	None at ELV or hazardous voltage.	Р
2.1.9	Conductive casings of capacitors	Casings of capacitors are considered as if directly connected to the respective circuitry. None at hazardous voltage accessible	Р
2.1.10	Risk of electric shock from stored charge on capacitors connected to mains circuit	No risk, see below	P
	Time-constant (s); measured voltage (V)	: Power supply is TUV approved.	3/4

2.2	Insulation		Р
2.2.1	Methods of insulation	Insulation The insulation materials provided in the equipment with adequate thickness and adequate	P

Clause	Requirement Test	Result - Remark	Verdict
		thickness and adequated creepage distance over their surface and clearance distance through air	
2.2.2	Insulation materials	Natural rubber, asbestos or hygroscopic materials are not used TUV approved power supply is considered.	P
2.2.3	Humidity treatment	Total 48H	P
	Humidity (%)	95%	3/4
	Temperature (°C)	25°C	3/4
2.2.4	Requirements for insulation	Please refer to 5.3, 2.9 and 5.1.	Р
2.2.5	Insulation parameters	Both parameters were considered.	Р
2.2.6	Categories of insulation	The adequate levels of safety insulation is provided and maintained to comply with the requirements of this standard.	Р
2.2.7	Determination of working voltages	The rms and the peck voltage were measured on the switching power supply. The unit was connected to a 240V TN power system and secondary ground was maintained during	Р
		TUV approved power supply is considered.	
2.3	Safety extra-low voltage (SELV) circuits		P
2.3.2	Voltage (V) between any two parts of SELV circuit(s) and for Class equipment between any part of SELV circuit and protective earthing terminal		P
2.3.3	Voltage (V) of SELV in the event of a single failure of basic or supplementary insulation or of a component	Single fault did not cause excessive voltage in accessible SELV circuits. Limits of 71V peak and 120V DC were not exceed and SELV limits not for longer than 0.2 seconds. See abnormal results 5.4.6.	3/4
	Method used for separation:	Method 1	Р
2.3.8	Construction of SELV circuits	Ring terminals for PE	Р

Clause	Requirement Test	Result - Remark	Verdict
		connection are prevented from pivoting which could impair distances to hazardous parts by starwasher. In multiway connectors and other cable, ties prevent contact to hazardous parts in case of loosening of connection or conductor breakage. IEC 83 and IEC 320 connectors	
2.3.9	SELV circuits connected to other circuits	are not used in SELV. No direct connection between	N
2.3.9	SELV Circuits connected to other circuits	SELV and primary circuit.	•
2.4	11:11:10:1		
2.4	Limited Current Circuit: Test voltage (V)		N 3⁄4
2.4.2	Measured current (mA)		74 N
2.4.3	Measured capacitance (uF)		N N
2.4.4	Measured charge (uC)		N
2.4.5	Measured energy (mJ):		N
2.5	Provisions for protective earthing	7/1/4	Р
2.5.1	Reliable connection	Basic insulated conductive parts touchable in operator area earthed reliably.	Р
2.5.2	Protective earthing in Class I equipment	Class I equipment	N
2.5.3	Switches/fuses in earthing conductors	No switches or fuses in earthing conductor.	N
2.5.4	Assured earthing connection for Class I equipment in systems comprising Class I and Class II equipment	This unit has its own earthing connection. Any other units connected via the interconnecting cable shall provide SELV only The equipment does not comprise class I and class II	N
2.5.5	Green/yellow insulation	Green/yellow wire from inlet to chassis. Green/Yellow wire to chassis reliable fixed with starwasher	Р
2.5.6	Continuity of earth connections	It is not possible to disconnect earth without disconnection mains as an appliance inlet is used.	Р

page 11 of 30

	National Deviation			
Clause	Requirement Test	Result - Remark	Verdict	
2.5.7	Making and breaking of protective earthing connections	Plug or inlet, earthing connected before and disconnected after hazardous voltage. No other operator removable parts.	P	
2.5.8	Disconnection protective earthing connections	It is not necessary to disconnect earthing except for the removing of the earthed parts itself	P	
2.5.9	Protective earthing terminals for fixed supply conductors or for non-detachable power supply cords	The equipment is provided with an appliance inlet	P	
2.5.10	Risk of corrosion	All safety earthing connections in compliance with Annex J.	Р	
2.5.11	Earth connector resistance £ 0,1 Ω	\leq 0.1 Ω , see below	Р	
	Test current (A)	See page 4 of test result.	3/4	
2.6	Primary power isolation		P	
2.6.1	Disconnect device	Appliance inlet	P	
2.6.2	Type of disconnect device	Appliance inlet	Р	
2.6.3	Disconnect device in permanently connected equipment	Pluggable equipment type A	N	
2.6.4	Protection of service personnel	When plug is disconnected no remaining parts with hazardous voltage in the equipment	Р	
2.6.5	Isolating switch in a flexible cord	No isolation switch provided.	N	
2.6.6	Disconnection of both poles simultaneously for single-phase equipment	The appliance inlet disconnects both poles simultaneously.	Р	
2.6.7	Disconnection of all phases for three-phase equipment	Single phase	N	
2.6.8	Marking of switch acting as disconnect device	See 1.7.8	Р	
2.6.9	Installation instructions if plug on power supply cord acts as disconnect device	See 1.7.2	Р	
	Language	English	3/4	
2.6.11	Disconnection of group of units	Interconnection to other device by secondary output cable only.	P	
2.6.12	Marking at each disconnect device	Only one supply connection provided.	N

National Deviation			
Clause	Requirement Test	Result - Remark	Verdict

2.7	Overcurrent and earth fault protection in primar	y circuits	Р
2.7.1	Basic requirements	Equipment relies on 16A rated fuse or circuit breaker of the wall outlet installation protection of the building installation in regard to L to N short circuit and for L to PE earth fault. Overcurrent protection is provided by the built-in device fuse.	P
2.7.2	Protection against faults not covered in 5.4	The protection devices are well dimensioned and mounted.	P
2.7.3	Adequate breaking capacity	: Plugable equipment type A, the building installation is considered as providing short circuit protection.	P
2.7.4	Number and location	: Overcurrent protection by one built-in fuse in approved power supply.	Р
2.7.5	Protection by several devices		N
2.7.6	Warning to service personnel	With reversible plug to the mains, hazardous voltage may be still presented in the equipment after the internal fuse opensHowever, as it is considered that the plug to the mains will be disconnected during service work, no marking are required	P

2.8	Need of safety interlock	N
	No operator accessible areas which presents hazards in the meaning of this standard.	
2.8.2	Design	N
2.8.3	Protection against intent reactivation	N
2.8.4	Reliability	N
2.8.5	Override system	N
2.8.6.1	Contact gap (m)	N
2.8.6.2	Switch performing 50 cycles	N
2.8.6.3	Electric strength test: test voltage (V)	N

Clause	Requirement Test	Result - Remark	Verdict	
3	WIRING, CONNECTIONS AND SUPPLY		Р	
3.1	General		P	
3.1.1	Cross-sectional area of internal wiring/interconnecting cables	All internal wires are UL recognized wiring that is PVC insulated, rated VW-1, min. 80 °C, 300V. Internal wiring gauge is suitable for current intended to be carried.	P	
		(see appended table 5.1)		
3.1.2	Wireways	Wires do not touch sharp edges and heat sinks which could damage the insulation and cause hazard.	P	
3.1.3	Fixing of internal wiring	Internal wires with only basic isolation are routed so that they are not close to any live bare components. The wires are secured by solder pins and quick connect terminals so that a loosening of the terminal connection is unlikely.	P	
3.1.4	Fixing of uninsulated conductors	Securely held on PCB. No hazard.	Р	
3.1.5	Insulation of internal wiring	The insulation of the individual conductors are suitable for the application and the working voltage. For the insulation materials see 3.1.1.	P .	
3.1.6	Wires coloured green/yellow only for protective earth connection	see 2.5.5.	Р	
3.1.7	Fixing of beads and similar ceramic insulators	Not used.	N	
3.1.8	Required electrical contact pressure	Grounding terminal screw engages at least two complete threads.	Р	
3.1.9	Reliable electrical connections	All current carrying and safety earthing connections are metal to metal.	Р	
3.1.10	End of stranded conductor	No risk of stranded conductors coming loose.	Р	
3.1.11	Use of spaced thread screws/thread-cutting screws	No self tapping screws are used.	Р
