4. 64bit/66MHz add-on card

- A. The PCA-6113P7X backplane provides high performance PCI slots running at 64 bit and 66MHz, and can also operate under various speeds of 32bit/33MHz, 32bit/66MHz, 64bit/33MHz.
- B. Once a 33 MHz card is installed in the bus group, the PCI bus speed will decelerate to 33 MHz. Depending on the speed requirement, it is highly recommended to allocate different add-on cards to different PCI groups. In order to obtain the best performance, please use 66MHz add-on cards in primary PCI group, and 33MHz add-on cards in secondary PCI group .
- C. Shall any incompatibility occur when using add-on cards running at 66MHz PCI bus in PCA-6113P7X backplane, please adjust the PCI bus frequency to 33MHz. The PCI bus frequency can be adjusted with JP3 and JP4. Correct jumper setting is available in this manual.

5. Detachable board

Depending on the chassis usage, users may need to remove the detachable board along the dotted lines.
