Rugged Laptop

Running on Intel's 1.4 GHz Dothan LV Processor, the Mobileforce M220 by Getac Inc. is a portable notebook computer that endures the standards set by the military for extreme use and meets the need of today's mobile workforce applications. The MobileForce M220 features a powerful processor, low power consumption, large storage capacity, lightweight design, and ease-of-use as well as a versatile Bay 1 and removable hard

drive (HDD) bay design. The M220's Bay 1 can accommodate an optical drive, or a second battery. The removable HDD bay gives users a wide array of advantages such as allowing multiple users to share the laptop without the HDD, thereby safeguarding data stored on the HDD. With the IP rating of 54, it can handle the harshest of environments. The computer meets military standards of 81°F and IEC's extreme standards for durability in surviving 3-ft drops, and is built to last in nearly any environment of dust, dirt, moisture, vibration, cold (-4°F), heat (130°F), altitude and explosive atmosphere. The M220 also has the option to meet the military stringent 410E standard, which makes the unit battlefield secure from electronic interference. 949-699-2888, sales@getac.com; www.getac.com.
