TEST REPORT
IEC 60950
Safety of information technology equipment

Report Reference No......: 133696-01
Compiled by (+ signature).....: Rasul M. Balacu
Reviewed by (+ signature).....: Johnny Jensen
Date of issue.....: 2002 November 22

This report is based on a blank test report that was prepared by FIMKO using information obtained from the TRF originator (see below). Total 41 pages.

Testing laboratory name.....: UL International DEMKO A/S
Address.....: Lyskaer 8, DK-2730 Herlev, Denmark
Testing location.....: Lyskaer 8, DK-2730 Herlev, Denmark

Client name.....: Advantech Co., Ltd.
Address.....: No.1, Alley 20, Lane 26, Rueiguang Road, Neihs District, Taipei, Taiwan

Standard.....: IEC 60950, 3rd Edition (1999)
Test procedure.....: CB Scheme
Procedure deviation.....: Argentina, Austria, Belgium, Brazil, Canada, China, Czech Republic, Denmark, Finland, France, Germany, Hungary, Ireland, Italy, Korea, Netherlands, Norway, Poland, Portugal, Russian, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Turkey, United Kingdom, USA, CENELEC
Non-standard test method.....: N/A

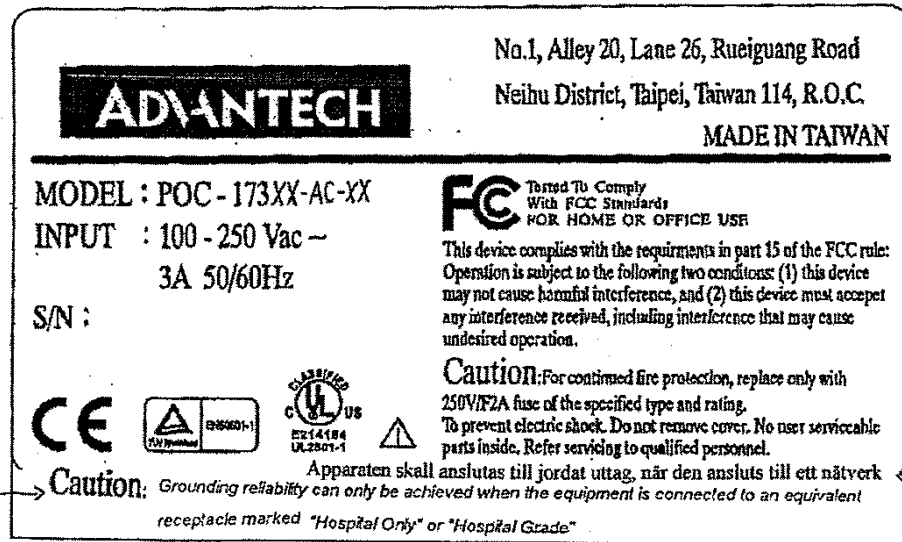

Test Report Form/blank test report

Test Report Form No......: I950___F/00-03
TRF originator.....: FIMKO
Master TRF.....: dated 00-02

Copyright reserved to the bodies participating in the IECEE Schemes (CB and CB-FCS) and/or the bodies participating in the C.I.G (CCA-ENEC).

Test item description.....: Personal Computer
Trademark.....: ADVANTECH
Model and/or type reference.....: POC-173XX-AC-XX, where the X can be any alphanumeric character or blank
Manufacturer.....: Same as Applicant
See General Product Information for factory details.
Rating(s).....: I/P: 100-250Vac, 50/60Hz, 3.0A

Copy of marking plate:

Particulars: test item vs. test requirements

Equipment mobility : movable
 Operating condition : continuous
 Mains supply tolerance (%) : +10%, -10%
 Tested for IT power systems : No
 IT testing, phase-phase voltage (V) : N/A
 Class of equipment : Class I (earthed).
 Mass of equipment (kg) : 8.8 kg
 Protection against ingress of water : IP20

Possible test case verdicts:

- test case does not apply to the test object : N / A
- test object does meet the requirement : Pass
- test object does not meet the requirement : Fail

General remarks:

- "(see Enclosure #)" refers to additional information appended to the Report.
- "(see appended table)" refers to a table appended to the Report.
- Throughout this report a point is used as the decimal separator.

The test results presented in this report relate only to the object tested. This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.
 This report is not valid as a CB Test Report unless appended to a CB Test Certificate issued by a NCB in accordance with IEC 60950-1.

General product information:

- The equipment is Personal Computer for general office use.
- The internal building-in switching power supply is a CB Certified component (see table 1.5.1 for details).
- The equipment was submitted and tested for use in a maximum manufacturer's recommended ambient (T_{mra}) of 40 °C.
- The USB, Keyboard and Mouse ports were considered to comply with LPS (Subclause 2.5).

Factories name and address:

- 1). Advantech Co., Ltd.
5FI, No1, Lane 169, Kang-Ning Street, Xi-Zhi Town, Taipei, Taiwan
- 2). Advantech Co., Ltd.
3rd FI, 10 Lane 130, Ming-Chuan Rd, Shing-Tien City, Taipei, Taiwan

The Report contains the following Enclosures:

Enclosure 1 : National Deviation..... Total 33 Pages
 Enclosure 2 : Total 06 Pages
 Photographs.....
 Enclosure 3 : PCB Layout of D/A Inverter..... Total 02 Pages

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

1	GENERAL		Pass
---	----------------	--	------

1.5	Components		Pass
1.5.1	Comply with IEC 950 or relevant component standard	(see appended table)	Pass
1.5.2	Evaluation and testing of components	<p>Components certified to IEC harmonized standard and checked for correct application.</p> <p>Components not certified are used in accordance with their ratings and they comply with applicable parts of IEC 60950 and the relevant component Standard.</p> <p>Components, for which no relevant IEC-Standard exist, have been tested under the conditions occurring in the equipment, using applicable parts of IEC 60950.</p>	Pass
	Dimensions (mm) of mains plug for direct plug-in	Not direct plug-in equipment.	N/A
	Torque and pull test of mains plug for direct plug-in; torque (Nm); pull (N)	Not direct plug-in equipment.	N/A
1.5.3	Thermal controls	There are no thermal controls.	N/A
1.5.4	Transformers	Evaluated as part of power supply.	Pass
1.5.5	Interconnecting cables	Interconnecting cables comply with the relevant requirements of this standard.	Pass
1.5.6	Capacitors in primary circuits	Evaluated as part of power supply.	N/A
1.5.7	Double or reinforced insulation bridged by components	Evaluated as part of power supply.	N/A
1.5.7.1	Bridging capacitors	Evaluated as part of power supply.	N/A
1.5.7.2	Bridging resistors	Evaluated as part of power supply.	N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
1.5.7.3	Accessible parts	Evaluated as part of the power supply.	N/A
1.5.8	Components in equipment for IT power systems	Not for use on IT systems.	N/A
1.6	Power interface		Pass
1.6.1	AC power distribution systems	AC power distribution systems are classify as TN.	Pass
1.6.2	Input current	The steady state input current of the equipment did not exceed the RATED CURRENT by more than 10% under NORMAL LOAD. (see appended table)	Pass
1.6.3	Voltage limit of hand-held equipment	The unit is not a hand-held equipment.	N/A
1.6.4	Neutral conductor	Neutral insulation is provided in the power supply.	Pass
1.7	Marking and instructions		Pass
1.7.1	Power rating	Rating marking readily visible to operator.	Pass
	Rated voltage(s) or voltage range(s) (V)	100 - 250 Vac	Pass
	Symbol for nature of supply for d.c.		N/A
	Rated frequency or frequency range (Hz)	50/60 Hz	Pass
	Rated current (A)	3.0 A	Pass
	Manufacturer's name/Trademark	Advantech Co., Ltd. / Advantech	Pass
	Type/model	POC-173XX-AC-XX, where the X can be any alphanumeric character or blank.	Pass
	Symbol of Class II	Class I equipment	N/A
	Other symbols		N/A
	Certification marks	UL, C-UL.	Pass
1.7.2	Safety instructions	Safety instructions in English. (CD/DVD-ROM, CD-R/W CLASS 1 LASER PRODUCT.)	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
1.7.3	Short duty cycles		N/A
1.7.4	Supply voltage adjustment	Equipment is auto-ranging.	N/A
1.7.5	Power outlets on the equipment	No standard power outlets are provided.	N/A
1.7.6	Fuse identification	Fuse marking provided on the approved power supply.	Pass
1.7.7	Wiring terminals	See below.	Pass
1.7.7.1	Protective earthing and bonding terminals	The earth terminal is marked with the standard earth symbol (60417-2-IEC-5019) near the terminal.	Pass
1.7.7.2	Terminal for a.c. mains supply conductors	The equipment with appliance inlet is intended to be use the detachable type power supply cord.	N/A
1.7.8	Controls and indicators	See below.	Pass
1.7.8.1	Identification, location and marking	The marking and indication of function is clearly.	Pass
1.7.8.2	Colours	A green LED is illuminated when the unit is operating or change to red indicate the unit operating at stand-by.	Pass
1.7.8.3	Symbols according to IEC 60417	The mains switch is marked with the symbols: "0" and "I" (60417-1-IEC-5007 and IEC-5008).	Pass
1.7.8.4	Markings using figures	Figures are not used for indicating different positions of controls.	N/A
1.7.9	Isolation of multiple power sources	There is only one connection to hazardous voltages.	N/A
1.7.10	IT power system	Not intended for use on IT power systems.	N/A
1.7.11	Thermostats and other regulating devices	No thermostats or similar regulating devices.	N/A
1.7.12	Language		—
1.7.13	Durability	The marking(s) withstood the required test.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
1.7.14	Removable parts	No marking is located on (a) removable part(s).	Pass
1.7.15	Replaceable batteries	The equipment contains replaceable lithium battery, user replaceable type: the following warning in user manual and service instructions. Marked with: CAUTION: Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer instruction.	Pass
	Language..... :	Only English language reviewed. May be provided in other languages upon request from the manufacturer.	—
1.7.16	Operator access with a tool..... :	No operator access areas require the use of a tool.	Pass
1.7.17	Equipment for restricted access locations..... :	Equipment not intended for installation in a RESTRICTED ACCESS LOCATION.	N/A

2	PROTECTION FROM HAZARDS		Pass
2.1	Protection from electric shock and energy hazards		Pass
2.1.1	Protection in OPERATOR access areas		Pass
2.1.1.1	Access to energized parts	No operator access to energized parts.	Pass
	Test by inspection :	Operator cannot contact with any parts with only basic insulation to ELV or hazardous voltage.	Pass
	Test with test finger :	The test finger was unable to contact bare hazardous parts, basic insulation, or ELV circuits.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

	Test with test pin	The test pin was unable to contact bare hazardous parts.	Pass
	Test with test probe	No TNV present.	N/A
2.1.1.2	Battery compartments		N/A
2.1.1.3	Access to ELV wiring	Internal wiring in an ELV circuit is not user accessible.	N/A
	Working voltage (V); distance (mm) through insulation		—
2.1.1.4	Access to hazardous voltage circuit wiring	No internal wiring accessible to the user.	N/A
2.1.1.5	Energy hazards	No operator access to hazardous energy.	N/A
2.1.1.6	Manual controls	The equipment does not contain any knobs, handles, levers, or the like.	N/A
2.1.1.7	Discharge of capacitors in the primary circuit	No risk of electric shock.	Pass
	Time-constant (s); measured voltage (V).....	Time constant less than 1 second.	—
2.1.2	Protection in service access areas	No bare parts operating at HAZARDOUS VOLTAGES in a service access area.	N/A
2.1.3	Protection in restricted access locations	The unit not intended to be used in restricted locations.	N/A

2.2	SELV circuits		Pass
2.2.1	General requirements	SELV levels are maintained after single fault condition.	Pass
2.2.2	Voltages under normal conditions (V)	All accessible voltages are less than 42.4 Vp or 60 V dc and are classified as SELV.	Pass
2.2.3	Voltages under fault conditions (V)	Under fault conditions voltages never exceed 71V peak and 120Vdc and do not exceed 42.4V peak or 60V dc for more than 0.2 sec.	Pass
2.2.3.1	Separation by double or reinforced insulation (method 1)	Evaluates in approved power supply.	Pass
2.2.3.2	Separation by earthed screen (method 2)	Method 1 used.	N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
2.2.3.3	Protection by earthing of the SELV circuit (method 3)	Method 1 used.	N/A
2.2.4	Connection of SELV circuits to other circuits	See 2.2.2, 2.2.3. The SELV has not connected to primary circuit directly.	Pass
2.3	TNV circuits		N/A
2.3.1	Limits		N/A
	Type of TNV circuits		—
2.3.2	Separation from other circuits and from accessible parts		N/A
	Insulation employed.....		—
2.3.3	Separation from hazardous voltages		N/A
	Insulation employed.....		—
2.3.4	Connection of TNV circuits to other circuits		N/A
	Insulation employed.....		—
2.3.5	Test for operating voltages generated externally		N/A
2.4	Limited current circuits		Pass
2.4.1	General requirements		Pass
2.4.2	Limit values	70 mA peak.	Pass
	Frequency (Hz).....	Frequency exceeding 1 kHz.	—
	Measured current (mA).....	The steady-state current drawn through a non-inductive resistor did not exceed 70 mA peak.	—
	Measured voltage (V)	Exceeds 0.45 kV peak or d.c., but does not exceed 15 kV peak or d.c.	—
	Measured capacitance (µF).....		—
2.4.3	Connection of limited current circuits to other circuits	Limited current circuit meets the limits of 2.4.2 under normal conditions and under single component or insulation faults in interconnected circuits.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

2.5	Limited power sources		Pass
	Inherently limited output		N/A
	Impedance limited output		N/A
	Overcurrent protective device limited output		N/A
	Regulating network limited output under normal operating and single fault condition	Polyswitch used in the equipment. See Table 1.5.1 for Polyswitch specifications.	Pass
	Regulating network limited output under normal operating conditions and overcurrent protective device limited output under single fault condition		N/A
	Output voltage (V), output current (A), apparent power (VA)..... :		—
	Current rating of overcurrent protective device (A)		—

2.6	Provisions for earthing and bonding		Pass
2.6.1	Protective earthing	Accessible parts are earthed.	Pass
2.6.2	Functional earthing	The functional earthing (SELV ground) have separated from hazardous part by Double / Reinforce insulation and connect to protective earth terminal.	Pass
2.6.3	Protective earthing and protective bonding conductors	PE conductor complies with 2.6.3.2, 2.6.3.3.	Pass
2.6.3.1	Size of protective earthing conductors	Power supply cord earthing conductor complies with Table 3B.	Pass
	Rated current (A), cross-sectional area (mm ²), AWG :	Min. 18AWG/0.75mm ²	—
2.6.3.2	Size of protective bonding conductors	Protective bonding conductors evaluated based on 2.6.3.3.	Pass
	Rated current (A), cross-sectional area (mm ²), AWG :		—
2.6.3.3	Rated current (A), type and nominal thread diameter (mm) :	Protective bonding conductors meet the minimum conductor size in table 3B.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
	Resistance (Ω) of earthing conductors and their terminations, test current (A) :	Test current = 40 A, 2 min. Voltage drop = 0.447 V Resistance = 0.011 Ohm	Pass
2.6.3.4	Colour of insulation :	Green/yellow or transparent used for protection earthing.	Pass
2.6.4	Terminals	Approved connector used.	N/A
2.6.4.1	Protective earthing and bonding terminals	Appliance inlet used and the unit meet the test requirement of 2.6.3.3.	Pass
	Rated current (A), type and nominal thread diameter (mm) :	Appliance inlet	—
2.6.4.2	Separation of the protective earthing conductor from protective bonding conductors		N/A
2.6.5	Integrity of protective earthing	See below.	Pass
2.6.5.1	Interconnection of equipment	This unit has its own earthing connection. Any other units connected via the output shall be provided SELV only. The equipment does not comprise class I and class II.	Pass
2.6.5.2	Components in protective earthing conductors and protective bonding conductors	No switch or fuse in earthing conductor.	Pass
2.6.5.3	Disconnection of protective earth	It is not possible to disconnect protective earth without disconnecting mains; an appliance inlet is used as disconnect device.	Pass
2.6.5.4	Parts that can be removed by an operator	Protective earth required makes earlier and breaks later than the supply connectors.	Pass
2.6.5.5	Parts removed during servicing	Connections to protective earthing cannot be removed unless hazardous voltage is removed from the part simultaneously.	Pass
2.6.5.6	Corrosion resistance	The protective earthing terminal has adequate plating. No risk of corrosion. Complies with Annex J.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
2.6.5.7	Screws for protective bonding	Metal thickness at least twice the pitch of the screw.	Pass
2.6.5.8	Reliance on telecommunication network		N/A
2.7	Overcurrent and earth fault protection in primary circuits		Pass
2.7.1	Basic requirements	Protective devices are integrated in the equipment.	Pass
	Instructions when protection relies on building installation	Pluggable Type A.	N/A
2.7.2	Faults not covered in 5.3	The protective device is properly sized and mounted.	Pass
2.7.3	Short-circuit backup protection	The equipment is pluggable Type A.	Pass
2.7.4	Number and location of protective devices :	One protective device in the "LIVE" phase.	Pass
2.7.5	Protection by several devices	Only one protective device is provided.	N/A
2.7.6	Warning to service personnel..... :	No protective device is provided in the neutral conductor.	N/A
2.8	Safety interlocks		N/A
2.8.1	General principles		N/A
2.8.2	Protection requirements		N/A
2.8.3	Inadvertent reactivation		N/A
2.8.4	Fail-safe operation		N/A
2.8.5	Interlocks with moving parts		N/A
2.8.6	Overriding an interlock		N/A
2.8.7	Switches and relays in interlock systems		N/A
2.8.7.1	Contact gaps (mm) :		N/A
2.8.7.2	Overload test		N/A
2.8.7.3	Endurance test		N/A
2.8.7.4	Electric strength test (V)		N/A
2.8.8	Mechanical actuators		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

2.9	Electrical insulation		Pass
2.9.1	Properties of insulating materials	Electric strength test was conducted after the humidity treatment.	Pass
2.9.2	Humidity conditioning	Humidity treatment performed to 120 hrs in condition: 91-95%, 40 °C.	Pass
2.9.3	Requirements for insulation	Electric strength test conducted after the humidity treatment. No flash over or breakdown of insulation. (see sub-clause 2.10, 4.5.1 and 5.2)	Pass
2.9.4	Insulation parameters	Both parameters were considered.	Pass
2.9.5	Categories of insulation	The adequate level of safety insulation is provided and maintained to comply with the requirements of this standard.	Pass

2.10	Clearances, creepage distances and distances through insulation		Pass
2.10.1	General	Pollution degree 2 applicable.	Pass
2.10.2	Determination of working voltage		N/A
2.10.3	Clearances	All critical clearance distances are covered in approved power supply.	Pass
2.10.3.1	General	Considered.	Pass
2.10.3.2	Clearances in primary circuit	All critical clearance distances are covered in approved power supply. (see appended table 2.10.3 and 2.10.4)	Pass
2.10.3.3	Clearances in secondary circuits	Functional insulation only. Waived by short circuit fault test on approved power supply per Sub-clause 5.4.4.	Pass
2.10.3.4	Measurement of transient levels		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
2.10.4	Creepage distances	Considered in approved power supply. (see appended table 2.10.3 and 2.10.4)	Pass
	CTI tests	Group IIIb values used Material group IIIb; $100 \leq \text{CTI} < 175$.	—
2.10.5	Solid insulation		N/A
2.10.5.1	Minimum distance through insulation	All critical distances through insulation are covered in power supply evaluation.	N/A
2.10.5.2	Thin sheet material	Considered in approved power supply.	N/A
	Number of layers (pcs)		—
	Electric strength test		—
2.10.5.3	Printed boards	PWB is not used as reinforced or supplementary insulation.	N/A
	Distance through insulation		N/A
	Electric strength test for thin sheet insulating material		—
	Number of layers (pcs)		N/A
2.10.5.4	Wound components		N/A
	Number of layers (pcs)		N/A
	Two wires in contact inside component; angle between 45° and 90°		N/A
2.10.6	Coated printed boards		N/A
2.10.6.1	General		N/A
2.10.6.2	Sample preparation and preliminary inspection		N/A
2.10.6.3	Thermal cycling		N/A
2.10.6.4	Thermal ageing (°C)		N/A
2.10.6.5	Electric strength test		—
2.10.6.6	Abrasion resistance test		N/A
	Electric strength test		—

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
2.10.7	Enclosed and sealed parts	No hermetically sealed or enclosed components used.	N/A
	Temperature $T_1 = T_2 + T_{mra} - T_{amb} + 10K$ (°C).....		N/A
2.10.8	Spacings filled by insulating compound	Optocouplers are approved components in the approved power supply.	N/A
	Electric strength test		—
2.10.9	Component external terminations		N/A
2.10.10	Insulation with varying dimensions		N/A

3	WIRING, CONNECTIONS AND SUPPLY	Pass
---	---------------------------------------	------

3.1	General		Pass
3.1.1	Current rating and overcurrent protection	All internal wiring used in the distribution of primary power protected against overcurrent and short circuit by suitably rated protective devices.	Pass
3.1.2	Protection against mechanical damage	The wires are routed away from sharp edges and parts which could damage insulation.	Pass
3.1.3	Securing of internal wiring	All wiring is reliably routed or separated and secured. The wires are positioned in such a manner that prevents excessive strain, loosening of terminal connections and damage of conductor insulation.	Pass
3.1.4	Insulation of conductors	Uninsulated conductors have been adequately fixed to prevent, in normal use, any reduction of creepage or clearance distances below those prescribed by in 2.9.	Pass
3.1.5	Beads and ceramic insulators	The equipment does not have any beads or similar insulators.	N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
3.1.6	Screws for electrical contact pressure	The equipment does not have any screw-type connections.	N/A
3.1.7	Non-metallic materials in electrical connections	No contact pressure through insulating material.	Pass
3.1.8	Self-tapping and spaced thread screws	Thread-cutting or space thread screws are not used for electrical connections. Machine screws only.	Pass
3.1.9	Termination of conductors		N/A
	10 N pull test		N/A
3.1.10	Sleeving on wiring	Sleeving is not used as supplementary insulation.	N/A
3.2	Connection to a.c. mains supplies		Pass
3.2.1	Means of connection	The unit is provided with an appliance inlet.	Pass
3.2.2	Multiple supply connections	Single mains supply.	N/A
3.2.3	Permanently connected equipment	The equipment is not permanently connected.	N/A
	Number of conductors, diameter (mm) of cable and conduits		—
3.2.4	Appliance inlets	The appliance inlet complies with IEC 60320.	Pass
3.2.5	Power supply cords	Detachable power supply cord suitable for the application and subject to country's national code and regulations is to be provided by the manufacturer.	N/A
	Type		—
	Rated current (A), cross-sectional area (mm ²), AWG		—
3.2.6	Cord anchorages and strain relief	Appliance inlet is used. The equipment does not use a non-detachable power supply cord.	N/A
	Mass of equipment (kg), pull (N)		—
	Longitudinal displacement (mm)		—

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
3.2.7	Protection against mechanical damage	No sharp edges.	N/A
3.2.8	Cord guards	The equipment does not use a non-detachable power supply cord.	N/A
	D (mm); test mass (g)		—
	Radius of curvature of cord (mm).....		—
3.2.9	Supply wiring space	The equipment provided with an appliance inlet.	N/A
3.3	Wiring terminals for connection of external conductors		N/A
3.3.1	Wiring terminals		N/A
3.3.2	Connection of non-detachable power supply cords		N/A
3.3.3	Screw terminals		N/A
3.3.4	Rated current (A), cord/cable type, cross-sectional area (mm ²)		N/A
3.3.5	Rated current (A), type and nominal thread diameter (mm)		N/A
3.3.6	Wiring terminals design		N/A
3.3.7	Grouping of wiring terminals		N/A
3.3.8	Stranded wire		N/A
3.4	Disconnection from the a.c. mains supply		Pass
3.4.1	General requirement	The appliance inlet is considered to be the disconnect device.	Pass
3.4.2	Disconnect devices	Unit employs an appliance inlet. See 3.4.1	Pass
3.4.3	Permanently connected equipment	Not permanently connected equipment.	N/A
3.4.4	Parts which remain energized	No parts remain energized when the disconnect device is removed.	N/A
3.4.5	Switches in flexible cords		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

3.4.6	Single-phase equipment	Disconnect device disconnects all poles simultaneously.	Pass
3.4.7	Three-phase equipment	The unit is single-phase equipment.	N/A
3.4.8	Switches as disconnect devices	A switch is not considered the disconnect device.	N/A
3.4.9	Plugs as disconnect devices	The appliance inlet is considered to be the disconnect device.	N/A
3.4.10	Interconnected equipment	No interconnection of hazardous voltages or energy levels.	N/A
3.4.11	Multiple power sources	The equipment only receives power from one source.	N/A

3.5	Interconnection of equipment		Pass
3.5.1	General requirements	This equipment is not considered for connection to TNV. Ref. to 2.2 for other details.	Pass
3.5.2	Types of interconnection circuits	The power supply is considered for connection to SELV only.	Pass
3.5.3	ELV circuits as interconnection circuits	No ELV interconnections.	N/A

4	PHYSICAL REQUIREMENTS		Pass
---	------------------------------	--	------

4.1	Stability		Pass
	Angle of 10°	Unit does not overbalance at 10°	Pass
	Test: force (N).....		N/A

4.2	Mechanical strength		Pass
4.2.1	General	see below.	Pass
4.2.2	Steady force test, 10 N	10N were applied to components. No energy or other hazards.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
4.2.3	Steady force test, 30 N	30N applied to internal chassis above power supply. No hazard as a result of the 30 N test.	Pass
4.2.4	Steady force test, 250 N	250N were applied to the outer enclosure. No hazards as a result of the 250 N test.	Pass
4.2.5	Impact test	500g steel sphere ball fall or swing from 1.3m height onto whole enclosure. No safety relevant damages.	Pass
4.2.6	Drop test	Unit is not hand-held, direct plug-in, or transportable.	N/A
4.2.7	Stress relief	After 7h at 70°C and cooling down to room temperature, no shrinkage, distortion or loosening of enclosure parts was noticeable on the equipment.	Pass
4.2.8	Cathode ray tubes	The equipment does not have any CRT.	N/A
	Picture tube separately certified		N/A
4.2.9	High pressure lamps	The equipment does not have any high pressure lamps.	N/A
4.2.10	Wall or ceiling mounted equipment; force (N) ... :	Mounting means withstands four times unit weight.	Pass

4.3	Design and construction		Pass
4.3.1	Edges and corners	All edges and corners are rounded and smooth.	Pass
4.3.2	Handles and manual controls; force (N)..... :		N/A
4.3.3	Adjustable controls		N/A
4.3.4	Securing of parts	No loosening of parts impairing creepage distances or clearances over supplementary or reinforced insulation is likely to occur.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
4.3.5	Connection of plugs and sockets	The equipment does not have any interchangeable plugs/sockets.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
4.3.6	Direct plug-in equipment	Not direct plug-in equipment.	N/A
	Torque (Nm) :		—
4.3.7	Heating elements in earthed equipment	The equipment does not have any heating elements.	N/A
4.3.8	Batteries	Battery is protected against charging current by R307, D17. Abnormal reverse current 0.24 mA.	Pass
4.3.9	Oil and grease	The insulation of the internal wiring is not exposed to oil, grease, etc.	N/A
4.3.10	Dust, powders, liquids and gases	The equipment does not produce dust or employ powders, liquids or gases.	N/A
4.3.11	Containers for liquids or gases	The equipment does not contain liquids.	N/A
4.3.12	Flammable liquids..... :	The equipment does not use any flammable liquids.	N/A
	Quantity of liquid (l)..... :		N/A
	Flash point (°C)..... :		N/A
4.3.13	Radiation; type of radiation :	Evaluated at separate component evaluation.	N/A
	Equipment using lasers		N/A
4.4	Protection against hazardous moving parts		N/A
4.4.1	General		N/A
4.4.2	Protection in operator access areas		N/A
4.4.3	Protection in restricted access locations		N/A
4.4.4	Protection in service access areas		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
4.5	Thermal requirements		Pass
4.5.1	Temperature rises	(see appended table)	Pass
	Normal load condition per Annex L :	Operated in the most unfavorable way of operation given in the operating instructions until steady conditions established.	Pass
4.5.2	Resistance to abnormal heat	Evaluated as part of approval power supply.	N/A
4.6	Openings in enclosures		Pass
4.6.1	Top and side openings	Foreign objects entering the enclosure will not contact bare parts at hazardous voltage or energy. (No hazardous parts within 5°projection).	Pass
	Dimensions (mm) :	Rear: numerous openings, each 3.3 mm diameter, covering two areas: 303 by 33 mm; 47 by 27 mm. And numerous openings for fan, each measuring 4 by 4 mm, covering an area: 59 by 59 mm.	—
4.6.2	Bottoms of fire enclosures	Openings in the bottom of any size under an internal barrier, screen or the like, which itself complies with the requirements for a FIRE ENCLOSURE.	Pass
	Construction of the bottom :	Numerous openings, each 3.3 mm diameter, covering an area: 170 by 27 mm. And numerous openings, each measuring 1.8 mm diameter, covering two areas: each 66 by 10 mm. And other two openings, each 6 mm diameter.	—
4.6.3	Doors or covers in fire enclosures		N/A
4.6.4	Openings in transportable equipment		N/A
4.6.5	Adhesives for constructional purposes		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

	Conditioning temperature/time :		—
--	---------------------------------------	--	---

4.7	Resistance to fire		Pass
4.7.1	Reducing the risk of ignition and spread of flame	Method 1: Selection and application of components and materials which minimize the possibility of ignition and spread of flame.	Pass
4.7.2	Conditions for a fire enclosure	With having the following components: - components with windings - wiring - semiconductor devices, transistors, diodes, integrated circuits - resistors, capacitors, inductors. The fire enclosure is required.	Pass
4.7.2.1	Parts requiring a fire enclosure	A fire enclosure covers all parts.	Pass
4.7.2.2	Parts not requiring a fire enclosure	A fire enclosure covers all parts.	N/A
4.7.3	Materials		Pass
4.7.3.1	General	The propagation of fire is minimized through the fire enclosure construction.	Pass
4.7.3.2	Materials for fire enclosures	Equipment is moveable with mass less than 18 kg. Fire enclosure material is V-1 minimum.	Pass
4.7.3.3	Materials for components and other parts outside fire enclosures	Decorative parts and parts outside of the fire enclosure are made of minimum HB material.	Pass

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
4.7.3.4	Materials for components and other parts inside fire enclosures	All internal materials are rated V-2 or better or are mounted on a PWB rated V-1 or better. Internal wiring is UL Recognized, marked VW-1 or FT-1 and strapped by individual cable ties (where needed).	Pass
4.7.3.5	Materials for air filter assemblies	The equipment does not have any air filters.	N/A
4.7.3.6	Materials used in high-voltage components	No high-voltage components.	N/A

5	ELECTRICAL REQUIREMENTS AND SIMULATED ABNORMAL CONDITIONS	Pass
---	--	------

5.1	Touch current and protective conductor current		Pass
5.1.1	General	See below.	Pass
5.1.2	Equipment under test (EUT)	Equipment designed to require simultaneous power from more than one power source. Test conducted with all sources connected.	Pass
5.1.3	Test circuit	Single phase equipment intended only for connection to star TN or TT system.	Pass
5.1.4	Application of measuring instrument	Test made to 10X20 cm metal foil in contact with accessible non-conductive part.	Pass
5.1.5	Test procedure		Pass
5.1.6	Test measurements	See below.	Pass
	Test voltage (V)	275 V/ 60 Hz	—
	Measured current (mA)	Max. 0.200 mA.	—
	Max. allowed current (mA)	3.5 mA (Class I movable)	—
5.1.7	Equipment with touch current exceeding 3.5 mA	Touch current is < 3.5 mA.	N/A
5.1.8	Touch currents to and from telecommunication networks	No TNV.	N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
5.1.8.1	Limitation of the touch current to a telecommunication network		N/A
	Test voltage (V)		—
	Measured current (mA)		—
	Max. allowed current (mA)		—
5.1.8.2	Summation of touch currents from telecommunication networks	No TNV.	N/A
5.2	Electric strength		Pass
5.2.1	General	Based on the electric strength test the use of the insulating materials within the equipment is satisfactory.	Pass
5.2.2	Test procedure	No insulation breakdown detected during the test. (see appended table)	Pass
5.3	Abnormal operating and fault conditions		Pass
5.3.1	Protection against overload and abnormal operation	(see appended table 5.3)	Pass
5.3.2	Motors	All disk drive motors evaluated as part of component evaluation. Fan motor evaluated as part of component evaluation.	Pass
5.3.3	Transformers	Evaluated in approved power supply.	Pass
5.3.4	Functional insulation	Functional insulation complies with the requirements (a), (b), or (c).	Pass
5.3.5	Electromechanical components	The equipment does not have any electromechanical components in the secondary.	N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict
5.3.6	Simulation of faults	Faults in primary and secondary components and Functional insulation were already considered during the approval of the power supply. Blocked ventilation openings test: Result see appended table. Fan stalled test: Result see appended table. Connector overload test: Result see appended table.	Pass
5.3.7	Unattended equipment		N/A
5.3.8	Compliance criteria for abnormal operating and fault conditions	No fire, emission of molten metal or deformation was noted during the tests. Electric Strength tests performed after abnormal and fault tests.	Pass

6	CONNECTION TO TELECOMMUNICATION NETWORKS	N/A
---	---	-----

6.1	Protection of telecommunication network service personnel, and users of other equipment connected to the network, from hazards in the equipment		N/A
6.1.1	Protection from hazardous voltages		N/A
6.1.2	Separation of the telecommunication network from earth		N/A
6.1.2.1	Requirements		N/A
	Test voltage (V)		—
	Current in the test circuit (mA)		—
6.1.2.2	Exclusions		N/A

6.2	Protection of equipment users from overvoltages on telecommunication networks		N/A
6.2.1	Separation requirements		N/A
6.2.2	Electric strength test procedure		N/A
6.2.2.1	Impulse test		N/A

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

6.2.2.2	Steady-state test		N/A
6.2.2.3	Compliance criteria		N/A

6.3	Protection of telecommunication wiring system from overheating		N/A
	Max. output current (A)..... :		—
	Current limiting method :		—

A	ANNEX A, TESTS FOR RESISTANCE TO HEAT AND FIRE		N/A
A.1	Flammability test for fire enclosures of movable equipment having a total mass exceeding 18 kg, and of stationary equipment (see 4.7.3.2)		N/A

					insulation class

IEC 60950			
Clause	Requirement + Test	Result - Remark	Verdict

4.5	TABLE: temperature rise measurements (con't)	Pass
supplementary information:		
Comments: The temperatures were measured by thermal couple (type T) and resistance method under worst case normal mode as described in 1.6.1 at voltage described in 1.6.5.		
The worst case normal mode is defined with full rated load (at constant power output). With max. ambient temperature specified as 40°C, therefore, the maximum temperature rise is calculated as follows:		
Winding components: (thermal couple used))		
Class E -> dTmax = 90K - 10K - (40-25)K = 65K		
Components with:		
max. absolute temp. of 105°C (Line choke) -dTmax = (105-40)K = 65K		
max. absolute temp. of 105°C (Electrolyte capacitor) -dTmax = (105-40)K = 65K		
max. absolute temp. of 105°C (PCB) -dTmax = (105-40)K = 65K		
max. absolute temp. of 60°C (Enclosure) -dTmax = (60-40)K = 20K		
when no class of insulation is given, min. insulation 105°C assumed.

National Differences to IEC 60950, 3rd Edition not declared at this time.

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict

Argentinean Differences to IEC 60950 Third Edition			
General	Household power supply sources are 220 V a.c., 50 Hz		N/A
1.5.2	Certified plug according to IRAM 2063 (two prong) or IRAM 2073 (three prong) are used in accordance with their ratings		N/A
1.7.2	Operating/safety instructions made available to the user in Spanish. Product information appears on the product..		N/A
1.7.12	Language of safety markings/instructions is Spanish		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict

Australian and New Zealand Differences to IEC 60950 Third Edition			
1.2.12.11	POTENTIAL IGNITION SOURCE Possible fault such as a faulty contact or interruption in an electrical connection, including a conductive pattern on printed boards, which can start a fire if, under normal operating conditions, the open circuit voltage exceeds 50 V (peak) ac or dc and the product of this open circuit voltage and the measured current through this possible fault exceeds 15 VA		N/A
1.5.1	Add to the first paragraph: "or the relevant Australian or New Zealand Standard".	All critical components are certified components.	N/A
1.5.2	Add to the first and third dashed items after the words "IEC Component Standard": "or the relevant Australian or New Zealand Standard".		N/A
1.6.1	Add: AC power distribution systems classified as TT or IT are not allowed	Unit not evaluated for use in IT system.	Pass
1.7.12	Add to the first paragraph: In Australia and New Zealand all safety instructions shall be in English.	Only English instructions reviewed.	Pass

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict

3.2.5	Substitute for Table 3B: SIZES OF CONDUCTORS			N/A
	Rated current of Equipment A	Minimum conductor sizes		
		Nominal kcmil (cross section area in mm ²)	AWG or kcmil (see note 1)	
	Over 0.2 up to and including 3	0.5*	18 [0.8]	
	Over 3 up to and including 7.5	0.75	16 [1.3]	
	Over 7.5 up to and including 10	(0.75) 1.00	16 [1.3]	
	Over 10 up to and including 16	(1.0) 1.5	14 [2]	
	Over 16 up to and including 25	2.5	12 [3]	
	Over 25 up to and including 32	4	10 [5]	
	Over 32 up to and including 40	6	8 [8]	
	Over 40 up to and including 63	10	6 [13]	
	Over 63 up to and including 80	16	4 [21]	
	Over 80 up to and including 100	25	2 [33]	
	Over 100 up to and including 125	35	1 [42]	
	Over 125 up to and including 160	50	0 [53]	
	Over 160 up to and including 190	70	000 [85]	
	Over 190 up to and including 230	95	0000 [107]	
	Over 230 up to and including 260	120	250 kcmil [126]	
	Over 260 up to and including 300	150	300 kcmil [152]	
	Over 300 up to and including 340	185	400 kcmil [202]	
	Over 340 up to and including 400	240	500 kcmil [253]	
	Over 400 up to and including 460	300	600 kcmil [304]	
	<p>*This nominal cross-sectional area is only allowed for Class II appliances if the length of the power supply cord, measured between the point where the cord or cord guard, enters the appliance, and the entry to the plug, does not exceed 2 m (0.5 mm² three-core supply flexible cords are not permitted; see Note 2 to Table 2.17 of AS/NZS 3191).</p> <p>NOTE 1: AWG and kcmil sizes are provided for information only. These items are commonly used to designate wire sizes in North America</p>			
4.3.6	Replace the third paragraph: Equipment having pins for insertion into socket-outlets shall comply with 2.8.1, 2.8.4, 2.10, 2.12.6 and 2.14.6 of AS/NZS 3112, using the 10 A gauge in Appendix A of AS/NZS 3112.	Not direct plug-in equipment.		N/A
	The equipment is inserted, as in normal use, into a socket outlet capable of accepting a 10 A plug complying with Fig. 2.1(a) of AS/NZS 3112. The socket outlet has a horizontal pivot at a distance of 8 mm behind the engagement face of the socket, and in the plane of the lower intersection of the center-lines of the contact apertures. The additional torque to be applied to maintain the engagement face in the vertical plane shall not exceed 0.25 Nm			N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
4.3.13	For the purpose of this standard compliance with AS/NZS 2211.1 is deemed to be compliance with IEC60825.1	Laser storage devices separately certified for compliance to IEC 60825-1.	Pass
4.7	Add after the clause: For alternative resistance to fire test methods, refer to AS/NZS, Annex YY.		N/A
6.2.2	Replace the first paragraph by: In Australia (not in New Zealand), compliance with 6.2.2 is checked by the tests of both 6.2.2.1 and 6.2.2.2.	No TNV present.	N/A
6.2.2.1	In Australia, the electrical separation is subjected to 10 impulses of alternating polarity, using the impulses test generator of Annex N for 10/700µs impulses. The interval between successive impulses is 60 s and the initial voltage, U_c is: - for 6.2.1a): 7 kV for hand-held telephones and for headsets; 2.5 kV for other equipment; - for 6.2.1b) and 6.2.1c): 1.5 kV. NOTES: 1. The 7 kV impulse is to simulate lightning surges on typical Australian rural and semi-rural network lines. 2. The value of 2.5 kV for case (a) has been chosen primarily to ensure adequacy of the insulation concerned, and it does not necessarily simulate likely overvoltages.		N/A
6.2.2.2	In Australia, the electrical separation is subjected to an electric strength test according to 5.2.2. <u>The a.c. test voltage is:</u> -for 6.2.1a): 3 kV -for 6.2.1b) and 6.2.1c): 1.5 kV NOTES: 1. Where there are capacitors across the insulation under test, it is recommended that d.c. test voltages are used. 2. The 3 kV and 1.5 kV values have been determined considering the low frequency induced voltages from the power supply distribution system.		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict

Canada/USA Differences to IEC 60950 Third Edition			
1.1	Equipment able to be installed in accordance with the National Electrical Code ANSI/NFPA 70 and the Canadian Electrical Code, Part 1		Pass
1.1.1	Equipment able to be installed in accordance with ANSI/NFPA 75 and NEC Art. 645 unless intended for use outside of computer room and provided with such instructions :		Pass
1.1.2	Equipment in wire-line communication facilities serving high-voltage electric power stations operating at greater than 1kV are excluded		N/A
	Special requirements apply to equipment intended for use outdoors	Not for outdoor use.	N/A
1.5.1	All IEC standards for components identified in Annex P.1 replaced by the relevant requirements of CSA and UL component standards in Annex P.1		Pass
	All IEC standards for components identified in Annex P.2 alternatively satisfied by the relevant requirements of CSA and UL component standards in Annex P.2		Pass
1.5.5	Interconnecting cables acceptable for the application regarding voltage, current, temperature, flammability, mechanical serviceability and the like :	Interconnecting cables comply with the relevant requirements of this standard.	Pass
	External cable assemblies which exceed 3.05m in length to be types specified in the NEC and CEC		N/A
	Detachable external interconnecting cables 3.05m or less in length and provided with equipment marked to identify the responsible organization and the designation for the cable... :		Pass
	Building wiring and cable for use in ducts, plenums and other air handling space subject to special requirements and excluded from scope		N/A
	Telephone line and extension cords and the like comply with UL 1863 and CSA C22.2 No. 233	There are no Telephone line and extension cords used.	N/A
	For other than limited power and TNV circuits, the type of output circuit identified for output connector :		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
1.7.1	Special marking format for equipment intended for use on a supply system with an earthed neutral and more than one phase conductor :		N/A
	Equipment voltage rating not higher than rating of the plug except under special conditions		N/A
1.7.2	Wiring terminals supplying Class 2 outputs marked with voltage rating and "Class 2" or equivalent..... :		N/A
1.7.6	Special fuse replacement marking for operator accessible fuses :		N/A
	Lamp replacement information indicated on lampholder in operator access area :	There is no lamp used.	N/A
1.7.7	Identification of terminal connection of the equipment earthing conductor :	Unit employs an appliance inlet.	N/A
2.1.1	Screw shell of Edison-base lampholder tied to the neutral conductor		N/A
2.1.1.1	Bare TNV conductive parts in the interior of equipment normally protected against contact by a cover intended for occasional removal are exempt provided instructions include directions for disconnection of TNV prior to removal of the cover	No TNV present.	N/A
2.3.1.b	Other telecommunication signaling systems (e.g., message waiting) than described in 2.3.1(b) are subject to M.4.	No TNV present.	N/A
	For TNV-2 and TNV-3 circuits with other than ringing signals and with voltages exceeding 42.4 Vp or 60 V d.c., the maximum current limit through the 2000 Ohm resistor with loads disconnected is 7.1 mA peak or 30 mA d.c. under normal conditions		N/A
	Limits for measurements across 5000 Ohm resistor in the event of a single fault are replaced after 200 ms with the limits of M.3.1.4		N/A
2.3.2	Enamel coating on signal transformer winding wire allowed as an alternative to Basic insulation in specific telecommunication applications when subjected to special construction requirements and routine testing	No TNV present.	N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
2.5	Overcurrent protection device required for Class 2 and Class 3 limiting in accordance with the NEC, or the Limited Power Source definition, not interchangeable with devices of higher ratings if operator replaceable		N/A
	VA for limited power source measured after 60 s of operation		Pass
2.6	Protective earthing terms applied per CEC, Part 1, Sec. 0 and NEC Art. 100		Pass
	Units having receptacles for output a.c. power connectors which are generated from an internal separately derived source have the grounded circuit conductor suitably bonded to earth		N/A
2.6.3.3	Capacity of connection between earthing terminal and parts required to be earthed subject to special conditions based on the current rating of the circuit	Considered. See IEC 60950 test report.	Pass
	Protective bonding conductors and their terminals of non-standard constructions (e.g. PWB traces) evaluated to limited short-circuit test of CSA C22.2 No.4		N/A
2.6.4.1	Field wiring terminals for earthing conductors must be suitable for wire sizes (gauge) used in US and Canada	Unit employs an appliance inlet.	Pass
2.7.1	Standard supply outlets protected by overcurrent device in accordance with the NEC, and CEC, Part 1		N/A
	Non-motor-operated equipment requiring special overcurrent protective device marked with device rating		N/A
	Data for selection of special external branch circuit overcurrent devices marked on the appliance		N/A
	Overcurrent protection for individual transformers that distribute power to other units over branch circuit wiring.....		N/A
	Additional requirements for overcurrent protection apply to equipment provided with panelboards		N/A
2.10.5.4	Multi-layer winding wire subject to UL wire requirements in addition to 2.10.5.4 and Annex U	Evaluated as an element of power supply certification.	N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
3.1.1	Permissible combinations of internal wiring/ external cable sizes for overcurrent and short circuit protection..... :	All wires/conductors possess adequate cross-sectional areas for their intended application.	Pass
	All interconnecting cables protected against overcurrent and short circuit	All wires/conductors possess adequate cross-sectional areas for their intended application.	Pass
3.2	Wiring methods permit connection of equipment to primary power supply in accordance with the NEC and CEC, Part 1	Evaluated during separate certification of power supply.	N/A
3.2.1	Permitted use for flexible cords and plugs	Unit employs an appliance inlet.	N/A
	Flexible cords provided with attachment plug rated 125% of equipment current rating		Pass
	Class II equipment provided with 15 or 20 A standard supply outlets, Edison-base lampholders or single pole disconnect device provided with a polarized type attachment plug	No standard outlet provided.	N/A
3.2.3	Permanently connected equipment has provision for connecting and securing a field wiring system (i.e. conduit, or leads etc.) per the NEC and CEC, Part 1	The equipment is not permanently connected.	N/A
	Equipment compatible with suitable trade sizes of conduits and cables		Pass
	Permanently connected equipment may have terminals or leads not smaller than No. 18 AWG (0.82 mm ²) and not less than 152 mm in length for connection of field installed wiring	The equipment is not permanently connected.	N/A
	If supply wires exceed 60 °C, marking indicates use of 75 °C or 90 °C wiring for supply connection as appropriate..... :		N/A
	Equipment intended solely for installation in Restricted Access Locations using low voltage d.c. systems may not need provision for connecting and securing a field wiring system. A method of securing wiring or instructions must be provided to ensure the wiring is protected from abuse		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
3.2.5	Length of power supply cord 1.5 to 4.5 m unless shorter length used when intended for a special installation		N/A
	Conductors in power supply cords sized according to NEC and CEC, Part I		N/A
	Power supply cords and cord sets incorporate flexible cords suitable for the particular application		N/A
3.2.6	Strain relief provided for non-detachable interconnecting cables not supplied by a limited power source	The equipment does not use a non-detachable power supply cord	N/A
3.2.9	Adequate wire bending space and volume of field wiring compartment to properly make the field connections	The equipment is not permanently connected or provided with a non-detachable power supply cord	N/A
3.3	Field wiring terminals provided for interconnection of units for other than LPS or Class 2 circuits also comply with 3.3		N/A
	Interconnection of units by LPS or Class 2 conductors may have field wiring connectors other than those specified in 3.3 if wiring is reliably separated		N/A
3.3.1	Terminals for the connection of neutral conductor identified by a distinctive white marking or other equally effective means		N/A
3.3.3	Wire binding screw terminal permitted for connection of No. 10 AWG (5.3 mm ²) or smaller conductor if provided with upturned lugs, cupped washer or equivalent retention		N/A
3.3.4	Terminals suitable to accept wire sizes (gauge) used in the U.S. and Canada		N/A
	Terminals accept current-carrying conductors rated 125% of the equipment current rating		N/A
3.3.6	Field wiring connections made through the use of suitable pressure connectors (including set screw type), solder lugs or splices to flexible leads		N/A
	Field wiring terminals marked to indicate the material(s) of the conductor appropriate for the terminals used		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
	Connection of an aluminum conductor not permitted to terminal for equipment earthing conductor		N/A
3.3.8	Connectors and field wiring terminals involving external Class 2 or Class 3 circuits provided with marking indicating minimum Class of wiring to be used		N/A
	Marking located adjacent to terminals and visible during wiring		N/A
3.4.2	Separate motor control device(s) required for cord-connected equipment rated more than 12 A, or if the motor has a nominal voltage rating greater than 120 V, or is rated more than 1/3 hp (locked rotor current over 43 A)		N/A
3.4.8	Vertically mounted disconnect devices, oriented so up position of handle is "on"		N/A
3.4.10	For computer-room applications, equipment with battery systems capable of supplying 750 VA for 5 min require battery disconnect means		N/A
3.6	Connections to a centralized DC power system comply with requirements for branch circuits in Sub-clause 3.2	The equipment does not connect to a centralized DC power system.	N/A
	Earthing of d.c. powered equipment provided		N/A
	Overcurrent and earth fault protection in accordance with 2.7 either provided in equipment or as part of building installation		N/A
	Terminals and leads provided for permanent connection of DC powered equipment to supply marked to indicate polarity if reverse polarity may result in a hazard		N/A
	Equipment with earthed terminal (terminal for the grounded conductor) of power source connected to frame of the unit provided with special instructions and provision for earthing		N/A
	Equipment with means for connecting supply to earthing electrode conductor has no switches or protective devices between supply connection and earthing electrode connection		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
	Special markings and instructions for equipment with provisions to connect earthed conductor of a DC supply circuit to earthing conductor at the equipment..... :		N/A
	Special markings and instructions for equipment with earthed conductor of a DC supply circuit connected to the earthing conductor at the equipment..... :		N/A
4.2.8.1	Special opening restrictions for enclosures around CRTs with face dimension of 160 mm or more	No CRT provided.	N/A
4.2.9	Compartment housing high-pressure lamp marked to indicate risk of explosion	The equipment does not have any high pressure lamps.	N/A
4.3.2	Loading test for equipment with handle(s) used to support more than 9 kg tested at four times the weight of the unit..... :		N/A
4.3.6	In addition to the IEC requirements, Direct Plug-in Equipment comply with UL 1310 or CSA 223 mechanical assembly requirements	Not Direct Plug-In unit.	N/A
4.3.12	The maximum quantity of flammable liquid stored in equipment comply with ANSI/NFPA 30 (Table NAE. 7)	The equipment does not use any flammable liquids.	N/A
	Equipment using replenishable liquids marked to indicate type of liquid to be used		N/A
4.3.13	Equipment which produces x-radiation and does not comply with 4.3.12 under all conditions of servicing marked to indicate the presence of radiation where readily visible		N/A
	Requirements contained in the applicable national codes and regulations apply to lasers (21 CFR 1040 and REDR C1370)	Certified Class 1 CD-ROM/DVD-ROM laser products may be employed.	Pass
4.7.1	Automated information storage equipment intended to contain more than 0.76 mm ³ of combustible media requires provision for automatic sprinklers or a gaseous agent extinguishing system		N/A
4.7.3	Equipment for use in environmental air space other than ducts or plenums provided with metal enclosure or with non-metallic enclosure having adequate fire-resistance and low smoke-producing characteristics		N/A

IEC 60950 Third Edition			
Sub-Clause	Difference + Test	Result - Remark	Verdict
	Low smoke-producing characteristics evaluated according to UL 2043		N/A
	Equipment for installation in space used for environmental air as described in Sec. 300-22(c) of the NEC provided with instructions indicating suitability for installation in such locations :		N/A

UK National Differences to IEC 60950 Third Edition			
3.2.1	Apparatus which is fitted with a flexible cable or cord and is designed to be connected to a mains socket conforming to BS 1363 by means of that flexible cable or cord and plug, shall be fitted with a "standard plug" in accordance with Statutory Instrument 1786: 1994 - The Plugs and Sockets etc. (Safety) Regulations 1994, unless exempted by those regulations. NOTE: "Standard plug" is defined in SI 1786: 1994 and essentially means an approved plug conforming to BS 1363 or an approved conversion plug.	Power supply cord suitable for the application and subject to country's national code and regulations is to be provided by the manufacturer; proper application to be determined by the country's local Certification Body.	N/A
3.2.5	A power supply cord with conductor of 1.25 mm ² is allowed for equipment with a rated current over 10A and up to and including 13A.		N/A
3.3.4	The range of conductor sizes of flexible cords to be accepted by terminals for equipment with a rated current of over 10A up to and including 13A is: 1.25 mm ² to 1.5 mm ² nominal cross-sectional area.		N/A
4.3.6	This test should be performed using an appropriate socket outlet with an earthing contact.		N/A
