Chapter 1

General Introduction

This chapter gives background information on ARK-2120 series.

1.1 Introduction

ARK-2120, an intelligent, fanless embedded system powered by Intel® Atom™ N2600/D2550 Dual Core low power processor with multiple I/O interface. The new generation Intel® Atom™ processor brings 44% improvement on processing power and 90% on graphics performance than previous generation Intel® Atom™ processors. These low-power platforms provide energy-efficient and environmentally responsible solutions, and serve applications targeted at factory automation, machine automation, kiosks, and self-service applications; and they operate reliably in -20 ~ 60° C environments!

Rugged & Multifunctional Design

ARK-2120 is powered by Intel® Atom™ N2600 1.6GHz/D2550 1.86GHz dual core processors in an Advantech, rugged-design embedded box PC. All models are fanless, and highlight various quality features including wide-input power supplies from 12V to 24V, wide temperature range -20 ~ 60° C, diverse expandability options, and structural strengthening. ARK-2120 enlarges the surface of the top cover and conductive cylinder to create maximum cooling effects for optimized cooling efficiency. It also provides rich I/O interfaces: up to 6 x USBs, 3 x GbEs, 6 x COMs, and supports high capacity 2.5" HDD up to 1 TB. The RS-232/422/485 COM port mode can easily be changed via BIOS setting.

Multiple Display Support

ARK-2120 supports multiple display types: VGA, HDMI or 48-bit LVDS display. The graphic engine is DirectX 9, H/W format decode/Acceleration, MPEG2 (H/W acceleration), H.264/ VC1/ WMV9 (H/W Decode/Acceleration). ARK-2120 supports dual independent display.

Built in Intelligent Management Tools - Advantech iManager & SUSIAccess

Advantech iManager provides a valuable suite of programmable APIs such as multi-level watchdog, hardware monitor, system restore, and other user-friendly interface. iManager is an intelligent self-management cross platform tool that monitors system status for problems and takes action if anything is abnormal. iManager offers a boot up guarantee in critical, low temperature environments so systems can automatically recover when voltages dip. iManager makes the whole system more reliable and more intelligent. ARK-2120 also supports Advantech's own SUSIAccess, which provides easy remote management so users can monitor, configure, and control a large number of terminals to make maintenance and system recovery simpler.

Chapter 2

H/W Installation

This chapter introduces external IO and the installation of ARK-2120 hardware.

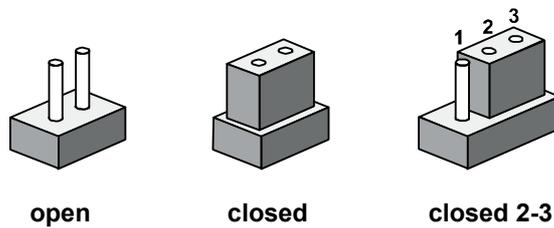

2.1 Introduction

The following sections show the internal jumpers setting and the external connectors pin assignment for application.

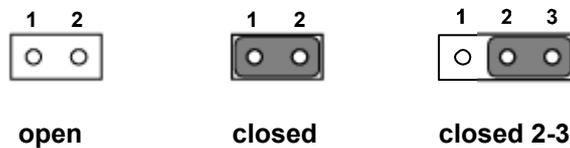

2.2 Jumpers

2.2.1 Jumper Description

You may configure ARK-2120 to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To close a jumper, you connect the pins with the clip. To open a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

The jumper settings are schematically depicted in this manual as follows.

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes. Generally, you simply need a standard cable to make most connections.
